

Disaster Recovery Introduction Course

Course Duration: 8 Hrs.

Course Code: DR-INT

Course Overview

The Disaster Recovery Introduction Course provides participants with a basic understanding of disaster recovery concepts and the importance of preparing for unexpected events that could disrupt business operations. It introduces foundational principles, processes, and strategies to help organizations maintain continuity and protect critical systems and data during incidents. The course is ideal for beginners seeking an overview of disaster recovery and its role within business continuity planning.

What you'll learn?

In this course, you will learn the fundamentals of disaster recovery, including identifying potential risks, understanding business impact, and applying basic recovery strategies. You will gain insights into the key components of disaster recovery plans, roles and responsibilities, and methods for maintaining organizational resilience during disruptions.

Target Audience

This course is suitable for IT staff, business continuity planners, risk and compliance personnel, system administrators, and anyone interested in gaining an introductory understanding of disaster recovery principles and practices.

Pre-Requisites

There are no formal prerequisites for this course. A basic awareness of IT systems, organizational operations, or risk management concepts will be helpful for understanding the course material.
