

ISO/IEC 27035 Introduction Course

Course Duration: 8 Hrs.

Course Code: ISO27035-INT

Course Overview

The ISO/IEC 27035 Introduction Course provides participants with a fundamental understanding of information security incident management as defined in ISO/IEC 27035. It introduces the principles, processes, and best practices for detecting, reporting, responding to, and learning from security incidents. This course helps organizations build a structured approach to incident management, improve response effectiveness, and enhance overall information security resilience.

What you'll learn?

In this course, you will learn the basics of information security incident management, including the identification, assessment, and response to security incidents. You will gain insights into incident handling processes, communication strategies, and the role of lessons learned in preventing future incidents. The course equips participants with foundational knowledge to support an organization's incident management program.

Target Audience

This course is suitable for IT professionals, information security officers, risk and compliance staff, incident response teams, and anyone seeking an introductory understanding of ISO/IEC 27035 and incident management practices. It is also beneficial for individuals looking to support or participate in an organization's security incident management activities.

Pre-Requisites

There are no formal prerequisites for this course. A basic awareness of information security concepts or organizational IT processes will be helpful for understanding the course content.
