

Oracle BI 12c: Create Analyses and Dashboards Ed 2

Course Duration: 40 Hours

Course Code: ANDB-ED2

1. Course Overview

The *Oracle BI 12c: Create Analyses and Dashboards Ed 2* course equips learners with the skills to build, format, and manage interactive dashboards and analyses using Oracle Business Intelligence (OBI) 12c. Participants will learn how to create advanced data visualizations, generate actionable insights, and deliver meaningful business reports. This training provides a solid foundation for effectively using Oracle BI to support organizational decision-making processes.

2. What You'll Learn?

By the end of this course, you will be able to:

- Navigate Oracle BI 12c and understand its core features.
- Create, modify, and format analyses for meaningful reporting.
- Design interactive dashboards to present data insights.
- Apply filters, prompts, and advanced formatting for dynamic reporting.
- Use advanced visualizations for impactful data representation.
- Schedule, deliver, and manage BI content for enterprise use.
- Understand best practices in creating BI reports and dashboards.

3. Target Audience

This course is best suited for:

- Business Analysts
- Report Developers
- Data Analysts
- IT Professionals working with Oracle BI
- Professionals seeking to improve decision-making with BI tools

4. Pre-Requisites

To make the most of this course, learners should have:

- Basic knowledge of SQL and relational databases
- Familiarity with data analysis concepts
- General understanding of business intelligence and reporting tools

5. Course Content

Module 1: Introduction to Oracle BI 12c

- Overview of Oracle BI 12c architecture
- Features and functionalities
- Navigating the BI interface

Module 2: Creating Analyses

- Building and modifying basic analyses
- Applying filters and prompts
- Formatting and saving analyses

Module 3: Working with Advanced Analyses

- Using calculated measures and hierarchical columns
- Applying advanced filters and conditions
- Creating advanced data visualizations

Module 4: Creating Dashboards

- Designing and customizing dashboards
- Adding dashboard objects and prompts
- Linking analyses within dashboards

Module 5: Delivering Content

- Scheduling and delivering reports
- Managing BI content and security
- Exporting reports and dashboards

Module 6: Best Practices and Case Studies

- Designing user-friendly dashboards
- Ensuring performance optimization
- Real-world case studies and scenarios
