

Siebel Technical Foundations 15.5 Course

Course Duration: 24 Hrs.

Course code: D70579

Course Overview

The Siebel Technical Foundations 15.5 Course provides participants with a comprehensive understanding of the Siebel CRM architecture, technical components, and key configuration concepts. The course focuses on application navigation, Siebel object architecture, data model fundamentals, business logic, and deployment practices. By combining theory with hands-on exercises, learners gain the technical expertise required to effectively implement, configure, and maintain Siebel CRM applications.

What you'll learn?

- Understand Siebel 15.5 architecture and components.
- Navigate and configure the Siebel Application effectively.
- Explore Siebel data model, business components, and objects.
- Learn about workflows, business services, and automation.
- Configure Siebel screens, views, and applets.
- Understand Siebel Integration concepts.
- Apply best practices in Siebel CRM deployment and administration.

Target Audience

- Siebel Developers and Technical Consultants
- Siebel Administrators and System Integrators
- IT Professionals working on Siebel 15.5 projects
- Solution Architects and CRM Specialists
- Freshers and professionals planning to build a career in Siebel CRM

Pre-Requisites

- Basic understanding of CRM concepts.
- Familiarity with databases and SQL.
- Prior exposure to enterprise application development is an advantage.
